

THE IMPORTANCE OF HYDROGEN

Our world is increasingly moving towards a green energy transition.

The role of Hydrogen (H₂) in this process has been attributed to enormous potential, offering a solution to many of the challenges faced in making the transition a reality.

It could essentially replace fossil fuels with a clean energy source throughout the economy with only water as a by-product, contributing not only in the decarbonisation of industries, but also in the improvement of climate change.

WHAT OLDRATI IS DOING IN THIS BUSINESS

The environment respect and the continuous research for innovative and sustainable materials belongs to our philosophy, which is reflected in all the world areas in which we operate.

We are certifying Oil&Gas compounds to verify their suitability in presence of hydrogen, under certain temperatures and pressures, to meet actual market needs!

Oldrati is a leading international group in the production of rubber, plastic and silicone products. Founded in Villongo (Bergamo) in 1964, it has a presence in Italy and internationally with 14 production sites, about 1,700 employees and 180 million euros in sales. The Group's continuous expansion is achieved through the gradual integration of high-tech companies and increasing internationalization.
